

Amendments to the Claims

1. (Currently Amended) A one compartment dishwasher, comprising:
a dishwashing compartment which is adapted to contain articles to be washed and in which spray means for spraying dishwashing liquid and rinsing liquid are arranged,

a dishwashing container, which is arranged under the dishwashing compartment and adapted to contain dishwashing liquid which in a dishwashing phase is to be supplied to the dishwashing compartment by the spray means, and

a rinsing container, which is adapted to contain rinsing liquid which in a rinsing phase is to be supplied to the dishwashing compartment by the spray means,

wherein the dishwashing container communicates with the dishwashing compartment to receive, through a collecting means, dishwashing liquid and rinsing liquid which have been discharged by the spray means,

wherein a recirculation rinsing container ~~[[which-]]~~is arranged under the dishwashing compartment and adapted to contain recirculation rinsing liquid, which in a pre-rinsing phase preceding the rinsing phase is to be supplied to the dishwashing compartment by the spray means, ~~[[and]]~~

the collecting means having a first outlet means which is adapted to flow liquid collected by the collecting means to the recirculation rinsing container, and a second outlet means which is adapted to flow liquid collected by the collecting means to the dishwashing container when the recirculation rinsing container is filled up.

2. (Previously Presented) A dishwasher as claimed in claim 1, in which the collecting means is a collecting plate which is arranged between the dishwashing compartment and the dishwashing container and which has a first through opening which communicates with the recirculation rinsing container and forms said first

outlet means, and a second through opening which communicates with the dishwashing container in which a circumferential frame is arranged, said frame projecting upwards from the collecting plate,

the second outlet means including a hole formed in the frame and said second opening, and said first opening being arranged close to the frame and essentially opposite to the hole.

3. (Previously Presented) A dishwasher as claimed in claim 1, in which the collecting plate is inclined relative to a horizontal plane in such a manner as to conduct liquid collected thereon to the first outlet means.

4. (Previously Presented) A dishwasher as claimed in claim 2, in which a further collecting means for liquid, which has been discharged by the spray means, is arranged over at least part of the second opening to conduct said liquid to the collecting plate.

5. (Previously Presented) A dishwasher as claimed in claim 4, in which the second collecting means includes a channel arranged over said part of the second opening.

6. (Cancelled)
